

Final design CAD drawings:

Here you will need to add all your final Corel draw files for everything that you have printed on the laser cutter. Add each Corel drawing on a new sheet, note: some pupils may have three of four sheets some will have one. You will need to write notes on each sheet and render your final design in Corel draw. On this sheet you should consider:

- o Add measurements and scale.
- o Add notes on what materials you used.
- o Add notes on how you constructed it together, eg: I painted it then glued it, what glue did you use, etc.
- o Why did you design your design like that? Write a paragraph on the design.
- o Add evaluations to your design. Eg: After I made it I realised I should have made that part differently?
- o Add photographs if needed of the finished item on each page.

Note: All Corel files will be found here on the network:

You will need to add notes and return it to your teacher ASAP for printing on A3 paper.
