

QA / QC:

Here you will list all your quality assurance and quality control tests you did on your products to ensure they remained good quality. Include:

- o How you checked dimensions were correct.
- o State that you checked laser cut work printed and etched correctly otherwise you had to increase the power settings.
- o Say you also checked each part of the product with other pupils and your teacher.
- o Talk about tolerances and how your products fell into your min and max tolerance points.
- o Talk about weight and if your products felt the same weight as an off the shelf product.
- o What techniques did you use to ensure your product was finished well? Discuss painting control methods eg: sanding back poor painting and doing it again, making pieces again that did not fit together properly, etc.

Note: See revision guide page 65.
