## Pro/DESKTOP

### What is Pro/desktop?

Pro/DESKTOP is a 3D modelling tool for designers and students. Pro/DESKTOP is used by designers and engineers to model products in three dimensions. Create designs in an easy and flexible manner. Pro/DESKTOP allows engineers, designers and students to explore fully their product ideas. When you become used to the 3D modelling, and you need to do more with Pro/DESKTOP you can move onto Pro/ENGINEER. Pro/ENGINEER is the big brother of Pro/DESKTOP and is used in industry for 3D CAD design.

### What does Pro/desktop do?

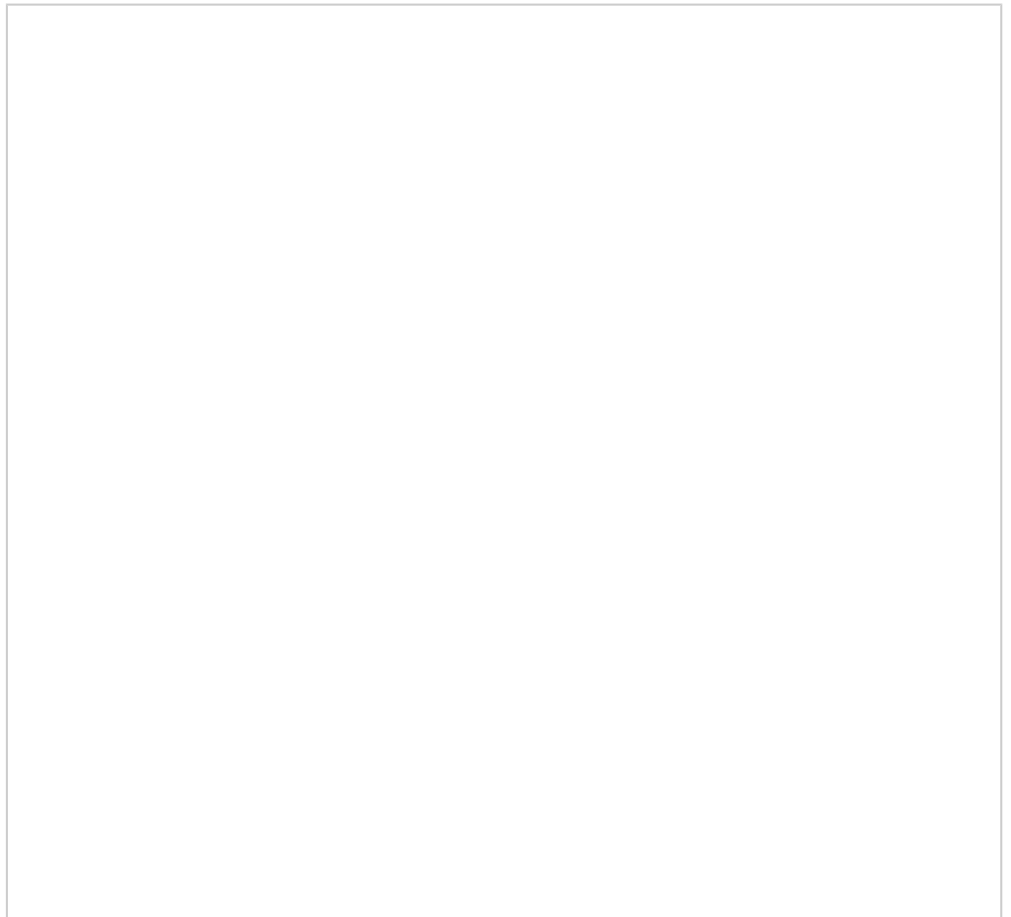

Pro/DESKTOP is easy to learn and use user interface. You can draw and create a 3D model of your product this is called solid modelling (Note: you can also sketch in 2D). Once your model is drawn you can render it using photo-realistic rendering options. Rendering is when image are mapped to the 3D models surface to give it texture. What do the final images look like I here you say well take a look for yourself at the ptc pupil design gallery:-

Quiz time!

Mr DT says 'Read the text above and then answer these questions below'. Write your answers on a sheet of paper, dont forget to write your name on the sheet!:-

- 1). What is Pro/DESKTOP?
- 2). What is Pro/DESKTOP used to do?
- 3). What is rendering?
- 4). If you need to do more with Pro/DESKTOP what tool would you move on to?
